Description

Environment - Xiaomi Redmi Note 9 Pro Max, MIUI Global 14.0.2 Stable, Status App v2.38.0.

Reproducibility - 5/5 (100%).

Description:

While navigating the app, the main user interface completely freezes and becomes unresponsive to touch input for approximately 10.7 seconds. System logs indicate a severe blocking delay on the main thread caused by the `IStatusGoService` background process.

Pre-conditions:

1. Status application is installed and launched.
2. Device has an active internet connection.

Steps to Reproduce:

1. Launch the Status application.
2. Initiate the 'Login' process.
3. Input the password, re-enter it to confirm, and tap the 'Confirm Password' button.

Expected Result:

The UI should immediately navigate to the next page(Home page). Heavy background cryptography should be processed asynchronously without freezing the main UI thread.

Actual Result:

The main UI thread locks up completely. Logcat throws multiple `Slow Binder` warnings, culminating in a transaction that takes 10,759 ms to resolve, resulting in a temporary Application Not Responding (ANR) state.

System Logs (Logcat Extract):

```
06-26 22:42:37.752 W MiuiPerfServiceClient:
interceptAndQueueing:30551|app.status.mobile|Slow main thread|2
06-26 22:44:31.962 W BpBinder: Slow Binder: BpBinder transact took
2589 ms, interface=app.status.mobile.ipc.IStatusGoService
06-26 22:44:33.477 W BpBinder: Slow Binder: BpBinder transact took
4105 ms, interface=app.status.mobile.ipc.IStatusGoService
06-26 22:44:50.697 W BpBinder: Slow Binder: BpBinder transact took
10759 ms, interface=app.status.mobile.ipc.IStatusGoService
```

Additional observation: While testing this, I noticed that during the 10-second freeze, the app appears to be trying to sync 'Market data' and 'Wallet data' in the background. I suspect this heavy data sync is what's blocking the main thread and causing the lag!
